

PROGRESSIVE

Royal Scare Progressive video poker rewards players for hands that are very close to a Royal Flush. The paytable adds a payline for a “Royal Scare” which is an Ace-high Straight, a Flush, or a Straight Flush, which contains four cards to a Royal Flush.

Players love Royal Scare because they won't become frustrated at having missed a Royal Flush — they will be rewarded for it instead!

Royal Scare is available in several configurations, including the option of having a progressive jackpot for the top two prizes (Royal Flush and Royal Scare). Configurations available return between 96% and 99.5% with optimal player strategy.

The Progressive version of Royal Scare offers more excitement than the fixed-win version by adding progressive jackpots to the Royal Scare and Royal Flush prizes.
